

PHÙNG VĂN LONG

Java Developer Intern
phungvanlong10925@gmail.com

DOB: 10/09/2005
Mobile: 0378203598
github.com/LongPhung205

SUMMARY

IT student with a strong foundation in software development, seeking an internship to gain hands-on industry experience. Eager to transition from academic and personal projects to a professional environment to learn coding standards, work with real-world systems, and grow under the guidance of experienced engineers.

EDUCATION

Hanoi University of Natural Resources and Environment
Bachelor of Information Technology

Hanoi, Vietnam
2023 – Present

- GPA: 3.33/4.00 | TOEIC Listening & Reading: 755/990

TECHNICAL SKILLS

Languages

: Java, PHP, TypeScript, SQL, HTML/CSS

Frameworks

: Spring Boot, Laravel, Angular, Tailwind CSS

Databases

: MySQL, Redis

Tools & Concepts

: Git, Docker, Postman, RESTful APIs, OOP

PERSONAL PROJECTS

AURA RESORT – Hotel & Villa Booking Platform

Java Backend Developer | Personal Project

Live Demo | GitHub

- Tech Stack:** Java 17, Spring Boot 3, MySQL, Redis, Spring Security, Ollama (LLM), MoMo API, Docker.
- Booking & Payment:** Developed RESTful APIs for villa booking with double-booking prevention; integrated MoMo payment gateway with IPN/Webhook verification.
- AI Assistant (Tool Calling):** Implemented an AI booking assistant using Tool Calling (Function Calling) via Ollama to dynamically extract user intents, query real-time villa availability from the database, and trigger booking actions.
- Security & Caching:** Configured stateless JWT authentication, role-based access control (RBAC), and enhanced query response time using Redis caching.
- Deployment:** Containerized multi-service architecture (Backend, Frontend, MySQL, Redis, Ollama) with Docker Compose and deployed onto AWS EC2.

AURELIA STORE – E-Commerce Platform & Core Payment Engine

Fullstack / Backend Developer | Personal Project

Live Demo | GitHub

- Tech Stack:** PHP 8.2, Laravel 11/12, MySQL, Vite, Alpine.js, TailwindCSS, Laravel Reverb, Docker, PHPUnit
- Payment & Transaction Reliability:** Engineered payment gateways (PayOS & MoMo) with secure Webhook processing, verifying HMAC-SHA256 signatures, ensuring idempotency to eliminate double-spending, and utilizing Database Transactions for ACID compliance.
- Concurrency & Inventory Management:** Designed a variant-level inventory system featuring stock reservation with automatic rollback on expired/cancelled checkouts to prevent stock overselling and race conditions.
- Third-Party Logistics:** Integrated Giao Hàng Nhanh (GHN) API for automated real-time shipping fee calculation, dynamic delivery estimates, and status synchronization.
- Real-Time Communication:** Deployed Laravel Reverb WebSockets to power live customer support chat and instant order status updates with zero-polling overhead.
- Code Quality & Testing:** Maintained codebase reliability by writing automated PHPUnit Feature & Unit tests covering critical payment workflows, order state transitions, and inventory deductions.
